

Runnymede Healthcare Centre Long-Term Care UPDATE

November 10, 2021

Construction of our new Long-Term Care Facility continues with plenty of activity, and we again thank you for your continued patience, and cooperation.

The installation of the temporary shoring system continues in parallel with the excavation to the east side of the site.

Below grade parking structure will continue to be installed, including the installation of rebar and concrete into 2022.

The tower crane is scheduled to be tentatively installed in Q4 of 2021.

Some significant concrete pours will also be commencing in the near future, which will result extended hours to ensure the concrete is placed and finished properly.

Over the course the next several months, there will also be utility works that will be executed by both the City of Toronto and Toronto Hydro to support the Runnymede LTC project. This will include the temporary relocation of overhead utilities along St. Johns Street as well as the permanent sewer and water service connections for the new building.

Daily cleanup and inspections continue, as well as water trucks and garden hoses assisting with dust mitigation.

Temporary sidewalk and lane closures will commence on the north side of St. Johns to safely facilitate large deliveries, as well as hydro line relocations.

Please note you should continue to expect to experience some noise and vibrations on an ongoing basis due to the plan construction activities.

As always, all health and safety protocols will be the utmost importance to the project team and will be followed at all times.

We do not anticipate disruption to patient activity or care, and we continue to work closely with our clinical teams to ensure that any disruption remains at a minimum.

Thank you for your continued understanding, patience, and cooperation.
