

Runnymede Healthcare Centre Long-Term Care

UPDATE

January 10, 2022

Happy New Year to all!!!

Construction of the new Runnymede Long-Term Care Facility continues with plenty of activity, and as always, we again thank you for your continued patience, and cooperation.

The installation of the temporary shoring system is now almost completed with the final section being installed.

Below grade parking structure will continue to be installed, including the installation of rebar and concrete into 2022.

The tower crane is scheduled to be tentatively installed in Q1 of 2022.

Significant concrete pours will continue into the spring, which will result in extended hours to ensure the concrete is placed and finished properly.

Over the course of the next few weeks, there will also be utility works that will be executed by the City of Toronto to support the Runnymede LTC project. This will include the permanent sewer and water service connections for the new building. The location of this work will be in 2 locations. (1) Across Fiske, just north of St. Johns, and (2) off Runnymede at the Hospitals entranceway.

Temporary sidewalk and lane closures will also continue on the north side of St. Johns to safely facilitate large deliveries and installations.

Please note you should continue to expect to experience some noise and vibrations on an ongoing basis due to the planned construction activities.

As always, all health and safety protocols will be of the utmost importance to the project team and will be followed at all times.

We do not anticipate disruption to patient activity or care, and we continue to work closely with our clinical teams to ensure that any disruption remains at a minimum.

Thank you for your continued understanding, patience, and cooperation.
